The parathyroid hormone/parathyroid hormone related protein (PTH/PTHIP)

receptor protein sequence was deduced form the DNA sequence of the
clone Ok-O, isolated from opossum kidney (OK) cells. The clone Ok-O
is identical to the OK-H clone exept at the C-terminal tail as OK-O
is identical to the OK-H clone exept at the C-terminal tail as OK-O
clone a 585 amino acid protein, OK-H encodes one of 515 amino acids.
The difference is attributed to a single nucleotide deleted in the OK-H
companies a frame shift and an earlier stop codon. It is not
known whether OK-O and OK-H represent prods. of two separate genes or
are a laboratory artifact. The protein may be used in a therapeutic
compsn. to inhibit activation of PTH or PTHIP and thus reduce the
level of calcium in the blood. Cpds. capable of competing with PTH
or PTHIP for binding can be identified using fragments of the
Clone as probes. The sequence may be used for the prodn. of antibodies
clone as probes. The sequence may be used for the prodn. of antibodies
cueful for the treatment. classification, prognosis and/or treatment of
disorders related to the interaction between a cell receptor and a
ligand such as in hypercalcaemia. See also R27704-16.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The parathyroid hormone/parathyroid hormone related protein (PTH/PTHrP) receptor protein sequence was deduced form the DNA sequence of the clone OKH, isolated from opossum kidney (OK) cells. The protein may be used in a therapeutic compsn. to inhibit activation of PTH or PTHrP and thus reduce the level of calcium in the blood. Cpds. capable of competing with PTH or PTHrP for binding can be identified
                                                                             A novel 7-transmembrane receptor (W12695) has been identified as a human G-protein parathyroid hormone (PTH) receptor, designated HLTDG74. It shows 48.2% homology to the human PTH receptor. Its from a chid sequence was deduced from a cDNA clone (T56619) isolated from a human T cell lymphoma tissue cDNA library. Recombinant HLTDG74 can be produced in transformed host cells and used to screen for (ant)agonist cpds. Agonists may be used to prevent or treat e.g. hypocalcaemia, hyperphosphateamia, hypoparathyroidism and chronic tetany by stimulating an increase in serum calcium levels. Antagonists can be used to inhibit the receptor e.g. for the treatment of osteoporosis, hypercalcaemia, hypoparathyroidism, hypophosphataemia, kidney stone, nephroliasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Schipani E;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA encoding parathyroid hormone receptor, DNA and antibodies

Host cells expressing the receptor can be used for diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Parathyroid hormone/parathyroid hormone-related protein (PTH/PTHrP) receptors (R92275 and R92776) are encoded by cDNA clones OK-H (T15945) and OK-O (T15946), respectively, isolated from an opossum kidney (OK) cell cDNA library. OK-H and OK-O may be the products of 2 separate genes or of a laboratory artifact. The receptor induces an increase in intracellular cAMP and calculum when challenged with PTH-PP. Recombinant receptors can be produced in vector/host cell systems and
                                                                                                                                                                                                                                                                                                                            Gaps
identified using fragments of the clone as probes. The protein may be used for the prodn of antibodies useful for the treatment, classification, prognosis and/or treatment of disorders related to the interaction between a cell receptor and a ligand such as in hypercalcaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  useful for

-!- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

-!- TISSUE SPECIFICITY: EXPRESSED PREDOMINANTLY IN TESTIS AND SKELETAL MUSCLE, TO INTERMEDIATE EXTENTS IN HEART, BRAIN, LUNG, LIVER, AND KIDNEY, AND TO A MINIMAL EXTENT IN SPLEEN.

-!- SIMILARITY: BELONGS TO THE HMG1/HMG2 PROTEIN FAMILY.
-!- FUNCTION: PROTEIN KINASE REQUIRED FOR NORMAL CELL MORPHOLOGY.
-!- CAUTION: REF.2 SEQUENCE DIFFERS FROM THAT SHOWN FROM POSITION 539
ONWARD AND IS SHORTER (563 AA) DUE TO A FRAMESHIFT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DEDILATOR, Y., Kuroda T., Harada H., Kishimoto T., Nakamura H.; Izumoto Y., Kuroda T., Harada H.; "Hepatoma-derived growth factor belongs to a gene family in mice showing significant homology in the amino terminus."; Biochem. PLOUCTION: PSCS PLANS A KEY ROLE IN PROLINE BIOSYNTHESIS, LEADING TO OSMOREGULATION IN PLANTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -!- CATALYTIC ACTIVITY: L-GLUTAMATE 5-SEMIALDEHYDE + ORTHOPHOSPHATE -
NADP(+) = L-GAMMA-GLUTAMYL 5-PHOSPHATE + NADPH.
-!- ENZYME REGULATION: FEEDBACK REGULATED BY PROLINE.
-!- PATHWAY: FIRST AND SECOND STEPS IN PROLINE BIOSYNTHESIS PATHWAY.
-!- TISSUE SPECIFICITY: REPRESSED AT HIGH LEVELS IN LEAVES AND IS
INDUCIBLE IN ROOTS SUBJECTED TO SALT STRESS.
-!- SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE GLUTAMATE 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Igarashi Y., Yoshiba Y., Sanada Y., Yamaguchi-Shinozaki K., Wada K.,

THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVATE ADENYIAL CYCLASE.
-1- TISSUE SPECIFICITY: EXPRESSED ABUNDANTLY IN BRAIN AND PANCREAS.
-1- ALSO EXPRESSED IN THE TESTIS.
-1- SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE; 97079671.

N:Alternate names: deltal.pyrroline-5-carboxylate synthetase
N:Contains: glutamate 5-Kinase (EC 2.7.2.11); glutamate-5-semialdehyde dehydrogenase (EC
C:Species: Oryza sativa (rice)
C:Date: 24 Mar-1999 #sequence_revision 24-Mar-1999 #text_change 07-May-1999
C:Accession: T03695
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rigarashi, T.; Yoshiba, Y.; Sanada, Y.; Yamaguchi-Shinozaki, K.; Wada, K.; Shinozaki, K. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Genomic DNA from Arthrobacter oxidans F1 was subjected to restriction enzyme analysis and the N-terminal amino acid sequence of L-fucose dehydrogenase determined. A degenerate probe was synthesised based on this amino acid sequence. The probe was used to screen an Arthrobacter cDNA library to isolate a L-fucose dehydrogenase clone. The isolation of such a clone provides a convenient method for prodn. of L-fucose dehydrogenase without the need for induction by L-fucose. The probe may be used to evaluate the extent of expression of L-fucose dehydrogenase. The DNA sequence is widely used to assay L-fucose levels. The protein sequence of L-fucose dehydrogenase and the protein sequence of L-fucose dehydrogenase. The protein sequence of L-fucose dehydrogenase may be used to produce antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated gene encoding L-fucose dehydrogenase - useful for prodn. of \operatorname{enz}_{\mathsf{yme}} by genetic engineering

Plants of any sort can be treated, e.g. to alter their size or resistance to disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is ALFCDKI, a new cyclin-dependent kinase (CDK) inhibitor of alfalfa. ALFCDKI CDNA (see X25017) was identified using a two-hybrid screening assay. The invention also provides novel CDK inhibitors FL139 and FL66 (see W98179 and W98180) from Arabidopsis thaliana. Several CDK inhibitors exist in plants and these inhibitors are expressed at different time points and may have different functions during the development of the plant. CDK inhibitors, nucleic acids, antibodies, promoter sequences, related recombinant DNA and vectors are all useful: for

This invention describes novel human nucleic acid (CDNA) sequences (A),
that are highly expressed in uterine tumour tissue and which have
anticancer and cytostatic activity. (A) are used (i) for recombinant
carperssion of polypeptides (B) and (ii) to isolate complete genes. (B)
are used (i) to identify agents suitable for treatment of uterine or
endometrial cancer; (ii) directly for treating these forms of cancer
(including expression from gene therapy vectors) and (iii) for generation
of specific antibodies. (A) are identified by assembling ESTS (expressed
sequence tags) from a particular tissue type before comparison of
cxpression patterns. This allows a significantly longer fragment of the
gene to be revealed, so should reduce the number of failures associated
with the fact that ESTS from different libraries may represent different
parts of the same unknown gene, distorting the estimated frequency of
ccurrence in a particular tissue. Y5991-Y60328 represent protein
fragments encoded by the human endometrium tumour cDNA library derived
EST fragments represented in 241981-242121.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä

                                                                                                                                                                                                                                                                                   S. cerevisiae wild-type gene ELM1 (Elongated Morphology) codes for a novel protein-kinase homolog required for yeast morphology. Deletion or mutation of ELM1 causes constitutive pseudohyphal growth. Manipulation of the gene can be used to control pathogenic transformation in fungi, to control plant pathogens, or to produce yeasts capable of fermenting polysaccharides to ethanol.

This sequence represents the mouse hepatoma derived growth factor (HDGF) and is encoded by the DNA molecule of the invention. The DNA encoding this sequence can be used in a vector which is used to transform an E. coli or animal cell. The transformed cell can be used for the
                                                                                                                                                                                                                                                                                                                                                                               The invention relates to modulators that affect the interaction of a polypeptide defining a PI (phosphotyrosine interaction) domain, or its conserved variants or fragments, with APP (amyloid precursor protein). The polypeptide defining a PI domain binds to the cytoplasmic domain of APP, regulating the secretion of APP fragments. By modulating this interaction, the modulator can inhibit or prevent APP processing and trafficking, and thus progress or onset of Alzheimer's disease. The modulators are used to treat and/or prevent neurodegenerative diseases in mammals, particularly Alzheimer's disease and dementia. Sequences Y13448-461 represent examples of polypeptides defining a PI domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding mouse hepatoma derived growth factor – and transformed E. coli or animal cell for its recombinant production
                                                                                                                                                                                                              Cell line for screening agents that inhibit processing of amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

SOF22 has apolipoproteinase activity, cleaving apolipoprotein APO-1, from high density lipoprotein (HDL). Cleavage of APO-1 from HDL leads to coagulation of the remaining fraction resulting in opalesence. This observation is a useful tool for qualitatively determining the concentration of HDL in mammalian sera, low levels of which contribute

                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a nrdE polypeptide. The polypeptide is used to screen for specific agonists and antagonists; to treat conditions that require increased activity or expression of nrdE; to raise specific antibodies: to identify receptors; and in vaccines. The polynucleotide is used for recombinant (or in vivo) production of the nrdE polypeptide, and as sources of antisense sequences that inhibit expression, or of probes and primers. Detecting mutations in nrdE-encoding genomic sequences, or measuring the expression of nrdE, can be used for diagnosis, staging and prognosis of disease (or susceptibility), also for serotyping or chromosome identification. Diseases which may be diagnosed or treated are particularly infection by S. aureus, but may also be infection by Helicobacter pylori, and associated ulcers and cancers.

This represents a human lung growth factor variant (LGFV). An expression vector containing the LGFV nucleic acid can be used to transform host cells for the recombinant production of the polypeptide. LGFV polypeptides play a role in growth and development as well as in infections, spermatogenesis, autoimmune diseases, vascular conditions and cancers. LGFV polypeptides and their agonists can be used to treat cells in vivo or ex vivo for tissue or organ regeneration, particularly in the proliferation and differentiation of bone marrow, nerve, pancreatic or remain cells. Antagonists or inhibitors of LGFV may be used to prevent concerns call proliferation and tissue damage due to excessive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              leukocytes produced during autoimmune or immunological responses. Such cancers may include leukaemia, lymphomas or carcinomas. Excessive immunological responses that may be treated include those attributed to e.g. viral (AIDS), bacterial (pulmonary pneumonia, hepatitis or septic shock), fungal (histoplasmosis, leprosy) or helminthic and parasitic orlagen vascular diseases, and autoimmune diseases such as haemolytic sclerosis, myasthenia gravis or rheumatoid arthritis. Inhibitors of LGFV can also be used to prevent spermatogenesis in mammalian reproductive thissues, thereby effecting male birth control. The products can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated lung growth factor variant - used to develop products for treating e.g. infections, autoimmune diseases, vascular conditions and cancers, or inhibiting spermatogenesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               tissues, thereby effecting male birth control. The per used for detection, diagnosis and drug screening

can be used in the detection of the presence of other mutated ISPK-1 genes. The method of detection comprises analysing an isolated DNA by digestion with a restriction endounclease which cleaves at the site of the mutation. The obtained restriction pattern is compared to a negative control restriction pattern (obtained from a wild type ISPK-1 gene) and a positive control restriction pattern obtained from a mutant ISPK-1 gene. This method may be used to diagnose predisposition to insulin resistance and possibly non-insulindependent diabetes mellitus. This sequence contains a ISBS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              histoplasmosis; leprosy; parasitic infection; allergy; septic shock; arteriosclerosis; atherogenesis; collagen vascular disease; haemolytic sclerosis; myasthenia gravis; rheumatoid arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   can be expressed using expression vectors to produce the corresponding recombinant protein. The protein can be used in assays to test substances known to inhibit the isoleucyl-tRNA synthetase or other tRNA synthetases of pathogenic organisms. Also, expression of the isoleucyl-tRNA synthetase in a tester strain can be useful for testing
                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of a human mitochondrial isoleucyl-tRNA synthetase. The cDNA encoding for the mitochondrial isoleucyl-tRNA
                                                                                 human G-protein parathyroid hormone (PTH) receptor, designated HLTDG74. It shows 48.2% homology to the human PTH receptor. Its amino acid sequence was deduced from a cDNA clone (T59619) isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The cDNA
                                                                 A novel 7-transmembrane receptor (W12695) has been identified as a
                                                                                                                               from a human T cell lymphoma tissue cDNA library. Recombinant HLTDG74 can be produced in transformed host cells and used to screen for (ant)agonist cpds. Agonists may be used to prevent or traat e.g. hypocalcaemia, hyperphosphataemia, hypoparathyroidism and chronic tetany by stimulating an increase in serum calcium levels. Antagonists can be used to inhibit the receptor e.g. for the treatment of osteoporosis, hypercalcaemia, hypoparathyroidism,
 hyper-calcaemia, hypo or hyper-phosphatemia, kidney stones, etc
                                                                                                                                                                                                                                                                                                                                                                           ;

```

```
The specification describes a crystal complex comprising at least a Sos contacting region of a Ras protein and at least a Son of sevenless (Sos) protein catalytic region fragment, that effectively diffracts X-rays. Ras and Sos form a tight complex. Sos does not impede the binding sites for the nucleotide base and the ribose of GTP or GDP and thus the Ras-Sos complex maintains a structure that permits or nucleotide release and rebinding. The crystals are used for the determination of the atomic coordinates of the complex to a resolution of more than 5.0 Angstrom. The crystals or a dataset comprising the for identifying an agent that stabilizes the Ras-Sos complex. The crystals are also useful for identifying agents that inhibit the formation of Ras-Sos complex. Ras and Sos fragments are useful for or inhibit the formation of Ras-Sos complex are useful in the
                                                                                                          1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ä
